PROFILE

engineer with a strong focus on infrastructure. At Simplicate I build features across a PHP (Symfony/Yii) and React/TypeScript SaaS platform, and work on its AWS infrastructure in Terraform: migrating production services to ECS Fargate, security alerting, data-store upgrades and Datadog observability. I like to understand systems down to the lowest layer, with a debugger, a packet capture or a decompiler.

SKILLS

Cloud & infra	AWS (ECS Fargate, ECR, RDS, ElastiCache/MemoryDB, S3, CloudFront, Lambda, API Gateway, Step Functions, Route 53, IAM), Terraform, Docker, Kubernetes, Ansible, GitHub Actions (OIDC), Linux, networking
Observability	Datadog (APM, logs, monitors), GuardDuty, Checkov, Monolog, incident response
Backend	PHP (Symfony, API Platform, Doctrine, Yii, Laravel), Go, Python, Node.js, MariaDB, Redis/Valkey RPC, GraphQL, WordPress, PHPUnit, PHPStan
Frontend & mobile	TypeScript, React, Redux Toolkit, Nx, Vitest, Storybook, i18next, Next.js, styled-components, React Native, Flutter
Ways of working	Code review, automated testing, Scrum, domain-driven design, agentic AI development (Claude Code, MCP, loop engineering)

EXPERIENCE

Product Software Engineer Simplicate · Amsterdam / Groningen — Jan 2025 – present

Dutch B2B SaaS for professional-services firms: CRM, sales, projects, time tracking and invoicing.

Cloud infrastructure (AWS, Terraform)

- Led the infrastructure side of moving PDF generation to a new ECS Fargate service (ECR, ALB, Route 53, Step Functions): implement visibility. First behind a FF then slowly switch over
- Migrated ElastiCache Serverless and MemoryDB to Valkey for: cost savings, performance and multi-az setup
- Carried out disaster recovery exercises on the AWS infrastructure.

Security & observability

- Set up GuardDuty alerting (including Runtime Monitoring) to Slack through AWS Chatbot with a least-privilege IAM role; enabled S3 access logging on the customer-data bucket and shipped the logs to Datadog; redacted credentials from nginx and auth-server access logs.

Product engineering (full-stack: PHP/Symfony, React/TypeScript)

- Moved CRM company lookup from OpenKVK (monthly data, Dutch only) to the Credit Device API, from API client to UI. Users now add a customer by picking a company name: company details fill in automatically and the website starts AI enrichment, also for companies abroad. Cached paid reports per tenant to cut costs.
- Helped replace the legacy CRM companies overview: search and filters that colleagues can share through a link, new columns (customer group, accounting and custom fields) in the list API, and bulk editing of invoicing settings, so users update many customers at once.
- Added different tools to Simplicate's MCP server

Team

- Review pull requests across the stack and hosted sprintdemo and host team moments and sprint reviews, present at the company tri-weekly and share findings in the engineering knowledge channel.
- Certified BHV'er (company emergency response: first aid, fire safety and evacuation) since 2026.

Software Developer Hike Digital · Utrecht Aug 2022 – Dec 2024

Digital agency. Intern from Aug 2022 to May 2023, then developer.

- Built and maintained websites and web applications for agency clients in sprints: headless WordPress (ACF, GraphQL) with Next.js and styled-components frontends, from new features to ongoing maintenance.
- Supported customers with questions about their sites and turned them into technical changes.
- Developing existing and new sites for customers
- Developed and maintained internal libraries shared across client projects.

SELECTED SIDE PROJECTS

Homelab as code Terraform · MikroTik · Kubernetes

Home network managed in Terraform: MikroTik router with VLAN segmentation, firewall, DHCP, centrally managed Wi-Fi (CAPsMAN) and WireGuard, plus Pi-hole DNS. Kubernetes on Talos Linux and Proxmox with MetalLB.

Reverse engineering Go · Python

Analysed EV-charger firmware formats and installer cryptography (alfen), and wrote a mitmproxy add-on that decodes the Stardew Valley UDP multiplayer protocol (stardew_valley_mitm).

Smaller projects

Ansible roles that provision a Hetzner server (Docker, fail2ban, Cockpit, off-site backups); a Go scraper pipeline over Kafka that compares climbing-gear prices; a Go desktop notifier for CI builds.

EDUCATION

HBO-ICT Hogeschool Utrecht Aug 2023 – Feb 2024

MBO 4 Software Development Grafisch Lyceum Utrecht Aug 2020 – Jun 2023

LEADERSHIP & VOLUNTEERING

Board member, weekend coordinator Utrechtse Studenten Alpen Club Sep 2024 – Sep 2025

Organised around 50 climbing trips a year, coordinating participants and instructors.

Climbing instructor(SKI3-OVSP) Certified 2025

Teach climbing and lead climbing trips outdoors.

LANGUAGES & INTERESTS

Languages	Dutch (native), English (fluent)
Interests	Climbing and mountaineering, homelab and networking, reverse engineering
