PROFILE

Full-stack product engineer with a strong focus on infrastructure. At Simplicate I build features across a PHP (Symfony/Yii) and React/TypeScript SaaS platform, and work on its AWS infrastructure in Terraform: migrating production services to ECS Fargate, security alerting, data-store upgrades and Datadog observability. I like to understand systems down to the lowest layer, with a debugger, a packet capture or a decompiler.

SKILLS

Cloud & infra	AWS (ECS Fargate, ECR, RDS, ElastiCache/MemoryDB, S3, CloudFront, Lambda, API Gateway, Step Functions, Route 53, IAM), Terraform, Docker, Kubernetes (Talos, Helm), Ansible, GitHub Actions (OIDC), Linux, networking (VLANs, WireGuard)
Observability	Datadog (APM, logs, monitors), GuardDuty, Checkov, Monolog, incident response
Backend	PHP 8 (Symfony, API Platform, Doctrine, Yii, Laravel), Go, Python, Node.js, MariaDB/MySQL, Redis/Valkey, REST/OpenAPI, RPC, GraphQL, WordPress (ACF), webhooks, PHPUnit, PHPStan
Frontend & mobile	TypeScript, React, Redux Toolkit, Nx, Vitest, Storybook, i18next, Next.js, styled-components, React Native (Expo), Flutter
Ways of working	Code review, automated testing, Scrum, domain-driven design, agentic AI development (Claude Code, MCP)

EXPERIENCE

Product Software Engineer Simplicate · Amsterdam / Groningen — Jan 2025 – present

Dutch B2B SaaS for professional-services firms: CRM, sales, projects, time tracking and invoicing.

Cloud infrastructure (AWS, Terraform)

- Led the infrastructure side of moving PDF generation to a new ECS Fargate service (ECR, ALB, Route 53, Step Functions): ran it next to the legacy service on staging behind a feature flag, added Datadog 5xx monitoring, switched production over and decommissioned the old stack.
- Migrated ElastiCache Serverless and MemoryDB to Valkey, added a MemoryDB replica for zero-downtime patching, enabled automatic minor-version upgrades on RDS (MariaDB) and right-sized read replicas and storage.
- Built self-service customer file exports for the internal management platform: S3, Lambda and an ECS workflow job, plus the permission checks and UI.

Security & observability

- Set up GuardDuty alerting (including Runtime Monitoring) to Slack through AWS Chatbot with a least-privilege IAM role; enabled S3 access logging on the customer-data bucket and shipped the logs to Datadog; redacted credentials from nginx and auth-server access logs.

Product engineering

- Added sales tools to Simplicate's MCP server (AI connector) and prototyped an AI-based sales conversion score.

Team

- Review pull requests across the stack and took over review-lead duties; host team moments and sprint reviews, present at the company tri-weekly and share findings in the engineering knowledge channel.

Software Developer Hike Digital · Utrecht Aug 2022 – Dec 2024

Digital agency. Intern from Aug 2022 to May 2023, then developer.

- Built and maintained websites and web applications for agency clients in sprints: headless WordPress (ACF, GraphQL) with Next.js and styled-components frontends, from new features to ongoing maintenance.
- Supported customers with questions about their sites and turned them into technical changes.
- Estimated hours for new client work.
- Developed and maintained internal libraries shared across client projects.

SELECTED SIDE PROJECTS

tsjak Equipment & PPE management platform 2025 – 2026

Multi-tenant app that tracks equipment, PPE inspections, damage incidents, rentals and depreciation, with access grants between organisations. Symfony API Platform on FrankenPHP (JWT, Mercure, Messenger) modelled with DDD aggregates, a Flutter app (BLoC), deployed to a VPS with Ansible (Vault + 1Password, Caddy, fail2ban).

Homelab as code Terraform · MikroTik · Kubernetes 2026

Home network managed in Terraform: MikroTik router with VLAN segmentation, firewall, DHCP, centrally managed Wi-Fi (CAPsMAN) and WireGuard, plus Pi-hole DNS. Kubernetes on Talos Linux and Proxmox with MetalLB; Terraform state in S3.

Reverse engineering Go · Python 2024 – 2026

Analysed EV-charger firmware formats and installer cryptography (alfen), and wrote a mitmproxy add-on that decodes the Stardew Valley UDP multiplayer protocol (stardew_valley_mitm).

Smaller projects 2023 – 2024

Ansible roles that provision a Hetzner server (Docker, fail2ban, Cockpit, off-site backups); a Go scraper pipeline over Kafka that compares climbing-gear prices; a Go desktop notifier for CI builds.

EDUCATION

HBO-ICT Hogeschool Utrecht Aug 2023 – Feb 2024

AWS training Self-initiated, in progress 2026 – present

MBO 4 Software Development Grafisch Lyceum Utrecht Aug 2020 – Jun 2023

LEADERSHIP & VOLUNTEERING

Board member, weekend coordinator Utrechtse Studenten Alpen Club Sep 2024 – Sep 2025

Organised around 50 climbing trips a year, coordinating participants and instructors.

Climbing instructor Certified 2025

Teach climbing and lead climbing trips outdoors.

LANGUAGES & INTERESTS

Languages	Dutch (native), English (fluent)
Interests	Climbing and mountaineering, homelab and networking, reverse engineering
